Market-Based Balancing

Understanding the fundamentals of Market-Based Balancing

The Market-Based Balancing MPOC Change Request has received a positive draft recommendation from the Gas Industry Company, signalling the most significant change in gas transmission for several years. Having a clear understanding of how to operate in the new environment will be crucial to parties throughout the supply chain.

emsTradepoint is offering a one day course to provide attendees with a comprehensive understanding of the Market-Based Balancing methodology. The course will focus on the cash-out model, and clearly identify the tools available when managing volume and price risks.
